EmotionLogic

EmotionLogic specializes in Affective Computing, using Emotion Intelligence Data to enhance product experiences with easy API integration. We detect genuine emotions through uncontrolled vocal cues, independent of intonation, language, or culture. Our core technology, Layered Voice Analysis (LVA™), focuses on vocal biomarkers to reveal concealed emotions, far and beyond the data that is revealed by analyzing text – an approach that makes our offering suitable for risk analysis, detection of fraud, proper KYC and underwriting procedures.

Reveal security

Not all abnormal behavior indicates malicious intent, but all fraudulent activity starts with abnormal behavior.
RevealSecurity is protecting Insurance Companies from Fraud activities by continuously identifying threats based solely on user activities and patterns (ML) without the need to develop control's rules manual.
At RevealSecurity, we have helped our customers quickly detect and respond to threats that involve trusted identities (Customers, Agents, Employees and trusted 3rd parties) operating inside your business, whether they be malicious insiders with existing privileges or external actors who have taken over privileged user accounts to gain unauthorized access to valuable company assets.
