TORINO/ITALY

The Place

Via E. Fenoglietti, 20
On the 3rd floor of Green Pea building

A.R.T. Global & Klinghardt Institute

We are thrilled to invite you to the 7th International Conference **Our Health Our Future**.

This year's conference is designed to address some of the most urgent health questions emerging in the post-COVID era

bringing together leading experts, practitioners, researchers and patient communities to explore these often complex and interconnected challenges.

Prof. Gerald H. Pollack PhD
Prof. Angus Dalglish
Daniela Deiosso MSc
Gilian Crowther MA (Oxon), NT/ND
Fabio Zoffi PhD
Dr. Nicola Antonucci
Dr. Giuseppe Marinaci

SPEAKERS

OUR HEALTH OUR FUTURE PROGRAM | 27/28 - 09 - 2025

Key Topics include

Post-Covid Medicine

The lingering impacts of COVID-19, including the ongoing effects of the spike protein, immune dysregulation and turbo cancers. Our speakers will share the latest clinical findings, therapeutic strategies and pathways to better understand long COVID and how to keep ourselves protected.

Detoxification in an increasingly Toxic World

From WiFi and EMF exposure to heavy metals and chemical pollutants, there is an ever-increasing toxic burden being placed on all living beings - as well as on the planet. Talks will focus on evidence-based detoxification strategies and protective interventions.

Children's Health: Autism, Anxiety, ADHD, PANS/PANDAS

Over recent years there has been an explosion in the rates of neurodevelopmental and neuropsychiatric disorders in children (and adults). Our speakers will focus on support strategies for children and families, looking at some of the specific issues now affecting increasingly more people.

Dental Health as a Systemic Issue

Bringing a spotlight to the often-overlooked connections between oral health and systemic disease, including hidden infections, dental materials, and the oral microbiome.

The Fourth Phase of Water and its Role in our Health

Our special guest speaker has uncovered evidence for water's long-sought fourth phase and he is actively pursuing its ramifications, focusing particularly on the close linkage between wellness and water's fourth (EZ) phase.
