

Smart Construction Management Platform

Integrated Platform Features

Real-Time Monitoring & Video Archiving

Integrates CCTV and action cams to monitor on-site inspections and production in real time. It centralizes video storage and playback to ensure quality control and full project traceability

Online Process & Schedule Management

Synchronizes construction schedules online to align supervisors and contractors. Real-time progress tracking and instant adjustments ensure on-time delivery and proactive issue resolution

Automated AI Documentation

Consolidates daily reports, logs, and site media into a unified digital work calendar. It supports automated report generation and cloud archiving for seamless compliance and data management

AI-Powered Safety & Fire Management

Utilizes video analytics to automatically detect fire hazards and PPE compliance (helmets/vests). Instant alerts are sent to managers via SMS or SNS to ensure immediate emergency response

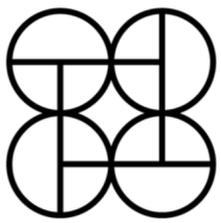

Smart Glasses & Big Data Integration

Employs smart glasses for hands-free collection of video, audio, and gesture data. This enables real-time big data analysis and provides essential input for digital twin synchronization

Drone, LiDAR & BIM-Based Analysis

Combines drone orthophotography and 3D LiDAR scanning with BIM drawings (Revit/Tekla). This allows for high-precision spatial measurements, design verification, and real-time error detection

ARION

Drone AI Agent Platform

The Integrated Standard for Intelligent, Autonomous Unmanned Operations

Advanced On-Device Intelligence

Arion is a comprehensive AI agent platform that enables true autonomy for unmanned systems across air and ground domains.

At its core are the AAS (Advanced Avionics System) and TODA (Technical On-device AI) modules. Built on NVIDIA GPU architecture, these "on-board brains" provide real-time object recognition, target tracking, and mission execution with ultra-low latency, allowing drones to think and act independently in complex environments.

Seamless Control and Diverse Hardware

The platform features the Arion GCS v2.0, a government-certified ground control system that supports 1-to-N swarm operations and BVLOS missions. By integrating small Language Model (sLLM) technology, operators can issue natural-language voice commands for autonomous execution.

This software ecosystem supports a versatile hardware lineup, including long-endurance eVTOLs, heavy-lift AAVs (up to 45kg payload), and agile multi-copters, all supported by wireless charging for 24/7 persistent operations.

Field-Proven Reliability and Impact

Arion has demonstrated its capabilities through over 20 military field experiments and successful deployments to the ROK Navy and Army. Beyond defense, it is utilized by the Korea Forest Service for AI-driven wildfire responses and by the Ministry of SMEs and Startups for logistics.

More than just hardware, Arion represents a unified AI ecosystem redefining autonomous operations for defense, smart cities, and disaster management.

The New Standard for AI Drones

EROP

Painless, Scarless, Wasteless

Design by Surgeon

EROP is a company that makes equipment essential for **surgical operations**.

EROP's sales have **grown tenfold over the past seven years and could be expected to be \$10 million by 2030**.

EROP is looking for a partner for a voyage beyond the Local market.

DUAL GUARD

STOM

STOM is a premium gut wellness brand built around one clear belief: restoring the gut environment is the starting point for reclaiming everyday life.

STOM's product portfolio is organized into two specialized lines.

STOM SLIM focuses on gut environment improvement as a foundation for healthy weight management.

The brand's dietary fiber supplement, Fiber Tablet 1000, supports digestive balance, promotes regularity, and helps regulate metabolic responses, naturally guiding the body toward sustainable weight control.

STOM SKIN connects gut health to visible skin radiance.

Non-Up Blend, a coffee alternative, improves the gut environment while replacing conventional coffee habits that may burden digestion.

By supporting digestive comfort without caffeine stimulation, it helps reveal clearer skin tone and natural glow from within.

Through this gut-centered approach, STOM reframes digestion not as a hidden issue, but as the key to slimmer balance, clearer skin, and a restored everyday life.

MYSTARPICK

The New Standard for Transparent & Profitable

Blockchain-powered Audition, Pageant & Fandom Voting Platform

Voting

Absolute Trust

Every vote recorded on public blockchain.
100% tamper-proof.

Total Control

Run contests, rules, and settlement from
one admin console.

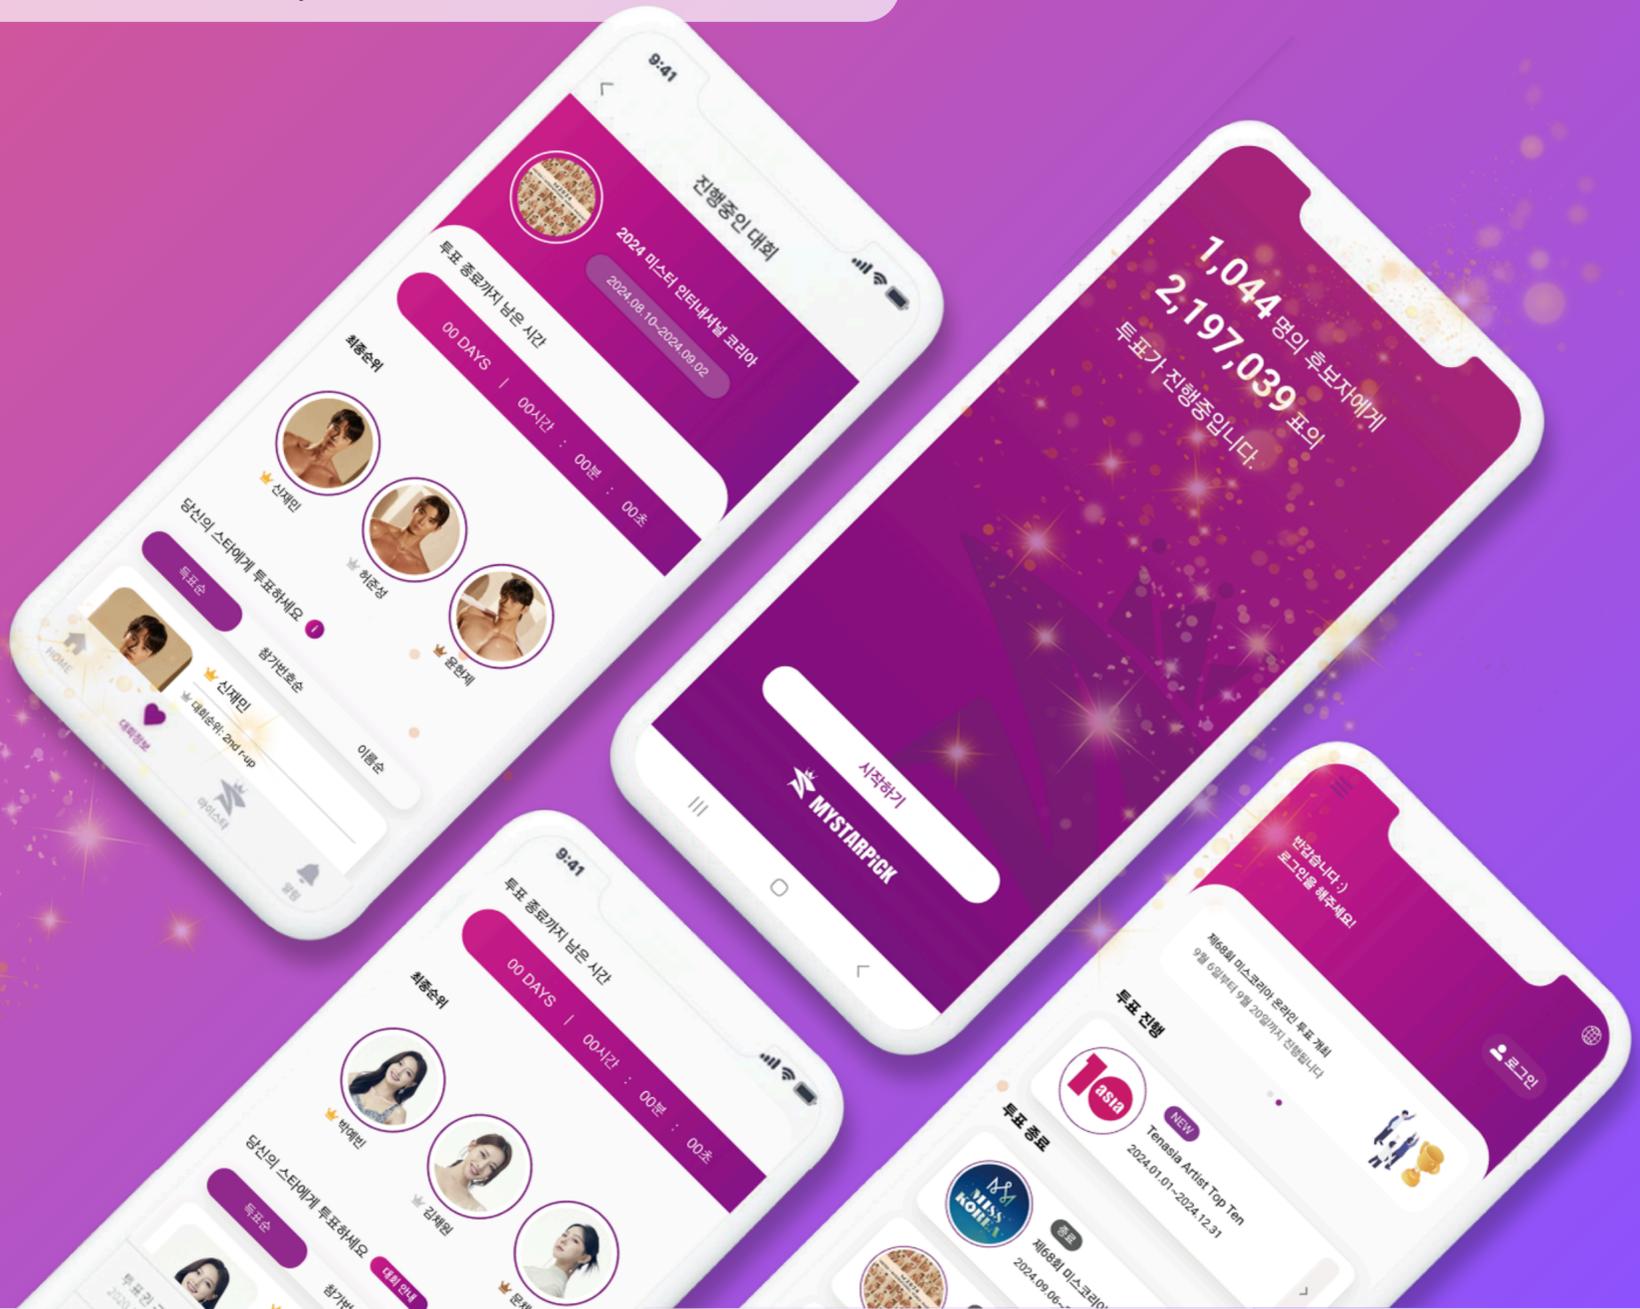

New Revenue Model

20~40%

Turn voting from a cost into a
revenue share profit center.

voting Works

GLOBAL MALE HEALTH CRISIS

- Male sperm counts have plummeted 51% globally over the past 40 years.
- Take control of your health with early screening!

1. HAGOBOGO: PERSONAL SPERM OBSERVATION DEVICE

- Hagobogo is a wellness device for users seeking a quick and easy way to monitor their health privately. Without any outside assistance, you can visually check your sperm status at home within 15 minutes.
- The dedicated app provides a 5x zoom feature for clearer observation and comparison. Highly portable and designed for single-use, it is currently available as a consumer product in the U.S. and Japan.

2. HAGOBOGO PRO: AI-POWERED FERTILITY DIAGNOSTIC

- Hagobogo Pro is a certified medical device designed for professional-grade family planning and fertility management. Utilizing advanced AI algorithms, it analyzes sperm concentration and motility with 98% clinical accuracy.
- The secure app allows you to track and manage your results over time with complete privacy. This 2-test kit, certified by MFDS and CE IVDR, is set to launch in **Korea and Japan in Q1 2026.**
