You're invited to a free online workshop!

Urban Forest Equity
Through Capacity Building

Danbury | Hartford | New Britain | New London | Waterbury | Willimantic

Trees help protect our homes and communities from extreme heat, flooding, and pollution. Every neighborhood should have access to the many benefits that trees and green spaces provide, yet why do some neighborhoods have less trees than others? **How do we get trees into neighborhoods that need them the most?**

Join us for a 2-hour workshop to discuss tree equity in your community. The workshop will bring together local stakeholders to evaluate and improve accessibility of groundbreaking urban forestry resources while envisioning collaborative solutions for local challenges.

Who can join: This workshop is designed for non-profit, municipal, or agency leaders, staff, and volunteers who are interested in learning about urban forestry. Our goal is to discuss how to improve the accessibility of current grant opportunities and resources for your municipality / organization.
