## The KL Premiere 2026

**Date**

**Venue**

9th March 2026  
17:30 - 21:00  
(Registration from 17:00)

Crescent Room (7F)  
Pavilion Hotel  
Kuala Lumpur

### FOCUS

Korea Daegu Metropolitan City and Daegu Technopark (DGTP) are pleased to present **K-TECH ASEAN GATEWAY: The KL Premiere 2026**, a Korea–Malaysia startup demo day and networking showcase held in Kuala Lumpur.

This event is designed as a gateway for Korean startups seeking to expand into the ASEAN market, with Malaysia positioned as a strategic regional hub. By bringing together innovative Korean startups, venture capital firms, and key ecosystem partners in Malaysia, the showcase aims to create meaningful opportunities for cross-border collaboration and growth.

Through startup IR pitching, ecosystem briefings, and curated networking sessions, the event provides a platform for Korean startups with strong technological capabilities and global ambitions to connect with Malaysian and regional investors who are actively exploring new opportunities in Southeast Asia. Participating venture capital firms will have the opportunity to discover innovative, investment-ready startups and engage directly with founders in a focused setting.

DGTP would like to express our sincere appreciation to Malaysia's startup ecosystem partners, including MYSTARTUP, for their valuable support and collaboration in making this event possible. Through this initiative, we hope to contribute to the continued growth and activation of the startup ecosystems in both Korea and Malaysia, and to strengthen long-term partnerships between the two countries.

# K-TECH ASEAN GATEWAY

## ARCHITECK

**AI-based smart construction and infrastructure management platform.**

ARCHITECK provides a cloud-based SaaS platform integrating AI, IoT, smart devices, and BIM to manage safety, quality, and productivity at construction sites. Its solution enables real-time monitoring, automated documentation, and AI-driven risk detection to reduce accidents and improve operational efficiency.

The platform is built for scalable deployment across large infrastructure and smart city projects.

## ARION

**The New Standard for AI Drone Agent Platforms.**

Arion is a comprehensive AI-powered platform that integrates on-device AI, ground control (Korea MOLIT Innovative Product), diverse airframes (eVTOL, multi-copter), and wireless charging (GuRu) into a unified autonomous system. The core features include real-time target detection, tracking, and coordinate acquisition, along with sLLM-based voice control.

Proven in defense (ROK Navy & Army), smart cities (drone delivery), and disaster safety (wildfire swarm response).

## EROP

**Medical and surgical equipment manufacturer.**

EROP develops surgical equipment designed to improve clinical outcomes with a “Painless, Scarless, Wasteless” approach. Its product lineup includes key operating-room solutions such as EROPTIX, NEW PORT PACK, and DUAL GUARD.

The company has shown strong sales growth in recent years and is pursuing further global expansion.

EROP is actively seeking international partners to scale beyond the local market.

## STOM

**Premium gut wellness brand.**

STOM develops gut-centered wellness products designed to restore digestive balance as the foundation of overall health.

Its portfolio includes STOM SLIM for weight management support and STOM SKIN for improving skin clarity through gut health.

By focusing on fiber supplementation and caffeine-free alternatives, STOM promotes metabolic balance and everyday vitality.

## MYSTARPICK

**Blockchain-based voting platform for auditions, pageants, and fandom engagement.**

MYSTARPICK records every vote on a public blockchain to ensure full transparency and tamper-proof trust.

It provides organizers with centralized admin tools to manage contest rules, operations, and settlement.

The platform also introduces a revenue-share model that turns voting into a profitable business channel.

## INTIN

**AI-powered male fertility screening and diagnostic solution.**

INTIN develops Hagobogo, an at-home sperm observation device that enables private health screening within 15 minutes.

It also offers Hagobogo Pro, a certified medical device using AI to analyze sperm concentration and motility with high clinical accuracy.

The company is expanding globally, with Korea and Japan launches planned in early 2026.
