Request a spot: www.luma.com/edusolvsalesforce

Limited spaces. Registrations are subject to approval.

KIMOON KIM

Kimoon Kim

AI & CLOUD ARCHITECT, GOOGLE

Google Cloud sits behind a large share of the AI tools institutions are starting to use, and its education footprint is already vast: Gemini for Education runs inside more than 1,000 higher education institutions in the US alone, reaching over 10 million students, and access is free for accredited institutions. In 2025, over one million educators and students took Google's free AI training for education. Kimoon brings first-hand practical insights from one of the biggest organisations in the world and will discuss which of Google's tools, programmes and support genuinely help an education institution, and where to start without over- committing.

RORY DANIELS

Rory Daniels

HEAD OF EMERGING TECHNOLOGY AND INNOVATION, TECHUK

techUK is the UK's leading technology trade association, representing more than 1,000 member companies, from global names to start-ups, and working directly with government on how the country adopts new technology. Its work spans AI policy and adoption, events, insights and international delegations, and it runs a dedicated education programme. On the panel, Rory brings the emerging technologies picture: what is rising fastest in AI, the new developments worth watching, and how institutions can start looking into them.

RACHEL FLETCHER

Rachel Fletcher

CEO, UNIQUEST

UniQuest is a specialist student conversion, recruitment, and retention service provider for the higher education sector in the UK and globally. Rachel founded and leads UniQuest, working inside student recruitment to universities since 2013 and has partnered with more than 85 universities during this time. UniQuest has handled over 70 million student communications and delivered 550,000 enrolments for partners worldwide. Rachel brings the ground-level reality: what it actually takes to move a traditional recruitment operation onto an AI-driven platform, what lifts conversion, and what universities still struggle with.

MEET THE PANEL · SALESFORCE AI CENTRE, LONDON

NAVNEET JOHAL

Navneet Johal

MARKETING CLOUD SPECIALIST UK&I EDUCATION, SALESFORCE

Navneet Johal is the marketing cloud specialist for education in the UK&I at Salesforce. Prior to this role, she was director of education product marketing and director of student experience for Education Cloud industry solutions at Salesforce.org. Before joining Salesforce, Navneet was a solution director for higher education and research at SAP, and a senior analyst at Ovum, where she led research on technology use in higher education. Navneet's passion for education and technology began when she taught in the further education sector in the U.K. for several years before moving to the U.S.

THERESA YURKEWICH HOFFMANN

Theresa Yurkewich Hoffmann

HEAD OF RESPONSIBLE AI, KAINOS

Kainos has been building digital services for four decades, including for UK government departments and the NHS, organisations that handle citizen and patient data under the closest scrutiny. Theresa leads its responsible AI work, drawing on a background across law, public policy and technology, including a responsible AI role at Microsoft and advisory work with the OECD. She holds the responsible AI thread for the panel: governance, ethics and data privacy, and the questions everyone worries about but few say aloud. What is safe, what is not, and how to adopt AI without putting student data or institutional trust at risk.

MODERATOR

GIULIANA BONVINI

Giuliana Bonvini

AI TRAINER AND FOUNDER, EDUSOLV AI

EduSolv AI is a London-based consultancy specialised in AI adoption, training and implementation within the international education industry. Giuliana has spent 18 years inside the sector, working for and with schools, universities, education agencies and sector- specific consultancies across continents, in commercial roles. She founded EduSolv AI in 2024 and created Education & AI Connect, a community-driven series of online and in-person events bringing AI literacy, discussions, panels, workshops and networking to education leaders worldwide.
