

Personalization, planning and technology

The new competitive advantage

NEXT SPINE BUSINESS

OCTOBER 6 2026

Scandic Rubinen Hotel

18:00 – 20:00 h

Spine surgery is entering a **new era**.

For years, innovation was presented as a **promise**: new technologies, new capabilities, new possibilities. **Today**, the market demands something more: **solutions that deliver real value**, that integrate into clinical practice and help surgeons make better decisions.

THIS IS WHERE DIGITAL ANATOMICS' OPPORTUNITY BEGINS

We are building a platform for spine surgery planning, personalization and technological assistance: an ecosystem capable of connecting **medical imaging, clinical data, software, anatomical knowledge and surgical execution**.

THE OPPORTUNITY IS TO BE PART OF THE TRANSFORMATION FROM THE BEGINNING

Business opportunity in personalized surgery

Digital Anatomics' technological capabilities

Access to new clients and international markets

Project and current portfolio evolution

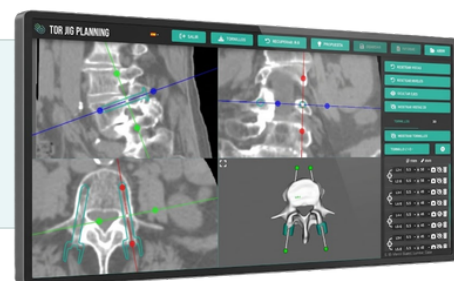

Increased differential value across the portfolio

Clinical and commercial collaboration model

Companies that know how to integrate this new technological layer into their value proposition will not only accompany the evolution of the market: **they will help define it.**
